PROFILE

DevOps Engineer with hands-on experience in AWS cloud architecture, containerization, CI/CD automation, and infrastructure monitoring. Skilled in designing highly available multi-tier applications on AWS, orchestrating containerized workloads with Kubernetes, and building automated deployment pipelines. AWS Certified Solutions Architect – Associate with a strong foundation in networking and Linux systems.

EDUCATION

Bachelor of Engineering – Electronics & Communication

Sohag University – Faculty of Engineering

Graduated: 2026

Overall Grade: Very Good

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate** – Amazon Web Services Aug 2026
- **Microsoft Certified: Azure Fundamentals (AZ-900)** – Microsoft Sep 2026
- **Digital Egypt Pioneers Initiative (DEPI) – DevOps Track** – DEPI Sep 2025
- **CCNA (Routing & Switching)** – NTI Sep 2023

PROJECTS

• AWS Scalable Web Application

Highly available, auto-scaling cloud-native web application on AWS

- Architected a 3-tier application with a custom VPC spanning 6 subnets across 2 Availability Zones
- Configured an Application Load Balancer with path-based routing to frontend (React/Nginx) and backend (Node.js/Express) EC2 Auto Scaling Groups
- Provisioned Amazon RDS PostgreSQL in a private subnet and S3 for image storage with pre-signed URLs
- Implemented AWS WAF, IAM least-privilege policies, and NAT Gateway for secure private subnet access
- Integrated CloudWatch Alarms and SNS notifications for infrastructure monitoring and alerting
- **Tech Stack:** AWS (VPC, EC2, ALB, Auto Scaling, RDS, S3, IAM, WAF, CloudWatch, SNS, Route 53), Docker, React, Node.js

• Cloud-Native Notes Application (DEPI Graduation Project)

Cloud-based web application for storing and managing notes

- Containerized the application using Docker and orchestrated services with K3s (lightweight Kubernetes)
- Built CI/CD pipelines with Jenkins for automated integration, testing, and deployment to AWS
- Integrated Prometheus and Grafana for real-time metrics collection, visualization, and monitoring
- **Tech Stack:** Docker, K3s, Jenkins, Prometheus, Grafana, AWS

• Multi-Service Docker Application

Multi-container architecture demonstration using Docker Compose

- Designed a containerized stack with a Flask API backend, PostgreSQL database, and Nginx reverse proxy
- Configured persistent data storage with Docker volumes and service networking for inter-container communication
- **Tech Stack:** Docker, Docker Compose, Flask, PostgreSQL, Nginx

SKILLS

DevOps & IaC:	Ansible, Git, Linux Administration
Containers:	Docker, Docker Compose, Kubernetes (K8s)
CI/CD:	Jenkins, GitHub Actions, GitLab CI
Monitoring:	Prometheus, Grafana
Networking:	TCP/IP, DNS, Load Balancing, Reverse Proxy, Nginx, CCNA
Programming:	Python, Bash, JavaScript
Databases:	PostgreSQL, MySQL
OS:	Linux (Ubuntu, CentOS), Windows Server
Cloud Platforms:	Amazon Web Services (AWS), Microsoft Azure
